Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      A cDNA clone (AAY4411) retmed NSS1 (for Normal Epithelial Specific-1), codes for a serine protease (AAM07420) negatively associated with spithelial coll malignancy. A radiation-transformed human mammary spithelial cell (NEC) line, 768-30, was established from a normal NEC strain, 76N py gamma-irradiation. Subtractive hybridisation between 76N and 78R-30 gamma-irradiation. Subtractive hybridisation between 76N and 78R-30 cells yielded the NESI clone, whose mRNA expression was greatly decreased in 78R-30 cells. NESI provides a diagnostic marter for breast, cervical and presence carcinomas and can provide genetic constructs for cancer the provide carcinomas and can provide genetic constructs for cancer to the provide carcinomas and can provide genetic constructs for cancer to the provide carcinomas and can provide genetic constructs for cancer to the provide carcinomas and can provide genetic constructs for cancer to the provide carcinomas and can provide genetic constructs for cancer to the provide carcinomas and can provide genetic constructs for cancer to the provide carcinomas and can provide genetic constructs for cancer to the provide carcinomas and can provide genetic constructs for cancer to the provide carcinomas and can provide genetic constructs for cancer to the provide carcinomas and can provide genetic constructs for cancer to the provide carcinomas and can provide genetic constructs for cancer to the provide carcinomas and can provide genetic constructs for cancer to the provide genetic constructs for the provide genet
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   NES1 polypeptide, negatively associated with epithelial cell malignancy - provides diagnostic marker for breast, cervical and prostate carcinoma, and can be useful for treating these diseases
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Band
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  1997-042855/04

                                                                                                                                                                                                           The present invention relates to a new method for assessing whether a priest is efficied with couring cancer. The mathod involves commanding the expression level of a marker in a patient sample and the normalized the expression of the marker in a patient sample and the normalized of expression of the marker in a control non-ovarian cancer sample where the marker is selected from 363 cancer markers described in the control non-ovarian cancer as early as expectionation. The method of the threation is useful in diagnosing or characteristing cancer, in detecting the presence of cancer as early as expectation of the patients having a samilal history of ovarian cancer. The method may also be particular use with patients having a samilal history of ovarian cancer. The cancer markers may be used in the analogement and treatment cancer. The cancer markers may be used in the analogement cancer that it is a concern to the cancer markers may be used in the analogement cancer. The cancer is a concern to the control of the c

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   B
                           The present invention relates to a method of diagnosing a cellular proliferative disorder of breast tissue, which involves determining the state of methylation of one or more nucleic acids isolated from the subject, where the state of methylation of the nucleic acids as compared with a state of methylation from a subject not having the cellular proliferative disorder of breast tissue in the subject. The nucleic acids proliferative disorder of breast tissue in the subject. The nucleic acids may be THIST, MOXAS, NEST, Testings acid receptor beta (RANGER) at Signa, perceptor, cyclin ps. Wilms, tumour gene (WT-1), 43.3 signa, and top makes the subject of the subject of decembining and the subject of the su
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     biagnosing and/or determining a predisposition to a cellular proliferative disorder of breast tissue, in particular breast cancer, by decermining the state of methylation of one or more nucleic acids

breast cancer including ductal carcinoma in situ, lobular carcinoma, colloid carcinoma, tubular carcinoma, medullary carcinoma, metuplassic carcinoma, intraductal carcinoma in situ, lobular carcinoma in situ and oppillary carcinoma in situ. The present sequence is a gone fragment used oppillary carcinoma in situ. in the exemplification of the invention.

Sequence 1454 BP; 289 A; 481 C; 377 G; 307 T; 0 other;

Of the present invention relates to the isolation of novel human contracts and the multic acids encoding them. The sequences of the invention are useful for treating diseases and disorders such as to cancers (e.g. breast, colon, lung), immune-related diseases and disorders (e.g. infilamentory diseases and asthma), cardiovascular diseases and contexts (e.g. intended in the context of the contex

The invention relates to 21% noval human overian antigens (ABPA104). Challed the invention and to copie encoding them (ABGSA1134) and also cancepasses polypeptides 90% identical and polymuoleotides 93% identical control the sequences of the invention. The invention additionally relates to recombinant vectors and host cells comprising human overian antigen control of overian antigen polymucleotides against human overian antigens, and the use control of overian antigen polymucleotides and polypeptides in disposing, and the use control of overian antigen polymucleotides and polypeptides in disposit, and the use control of overian antigen polymucleotides and polypeptides in disposit, and the use control of overian antigen polymucleotides and polypeptides in disposit, and the use control of overian property and overian antigen, and the use control of overian property and the use of polypeptides overy syndrome, relatively disposit, and describe the control of overian overian overian antigen polypeptides and control overian property disposit, and toxic shock syndrome, inflammatory conditions (e.g., mastitis, copientis, and toxic shock syndrome, intended property of the property of the polyperty disposit, and copient is, systemic land acquire and toxic shock syndrome, sensor of the polyperty disposit, and toxic shock syndrome, period of the control of the polyperty disposit, and toxic conditions of the polyperty disposit, and toxic control of the polyperty disposit, and the control of the polyperty of the polyperty disposit, and the control of the polyperty of the polyperty
                                             Note: The sequence data for this patent did not form part of the printed specification, but was obstaned in electronic format directly from WIPO at ftp.wipo int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Isolated nucleic acid molecules encoding novel ovarian polypeptides, useful in the prevention, treatment and diagnosis of cancer (e.g. ovarian cancer). Screening for anti-neoplastic agent involves exposing cells to a chemical agent to be tested for anti-neoplastic activity, and determining a change in expression of a gene of a signature gene set

# Claim 1; SEQ ID 1678; 44pp; English.

contine present invention describes a method (MI) for screening for an anti-neoplastic agent. The method involves exposing cells to a chemical cagent to be tested for anti-neoplastic activity, determining a change in copyression of at least one gone (I) of a signature gene set, where (I) comprises a sequence (S) selected from 847 sequences (given in ABLG164 CC to ABL70110), or is at least 531 identical to (S), where a change in a sepression a indicative of anti-neoplastic agent (S) and the sequence (S) and the sequence (S) and the sequence (S) where a change in a sepression a indicative of anti-neoplastic agent and can be used in the sequence which can anti-neoplastic agent, and can be used at the sequence of the sequence of the sequence which can be used in the capital of the sequence o

```
The present invention describes a method (M1) for exceeding for an attineoplastic agent. The method involves exposing coll. To a change in case the state of the tested for anti-neoplastic activity, determining a change in comprises a sequence (8) sealected from 8447 sequences (given in BALG164 CC to ABL7011), or is at least 93 identical to (8), where a change in expression is indicative of anti-neoplastic activity. (I) has proceed for screening can anti-neoplastic agent, and can be used for screening can anti-neoplastic agent, and can be used for producing a product which the strictly and can be used for producing a product which can the data collected with respect to the arti-neoplastic agent as a settle data collected with respect to the arti-neoplastic agent as a settle of M1, and the data is sufficient to convey the chemical collected with the second of the complex of the complex of the second of the complex of the complex of the second of the complex of the complex

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          simple preferably serum or ovarian tissue. The method comprises mount of polymucleotide hybridising to (IV) and comparing the amount of polymucleotide hybridising to (IV) and comparing the amount to a predetermined cutoff value and thready detecting ovarian cancer in the detected preferably by polymucleotide hybridising to (IV) is detected preferably by polymerase chain reaction (PCD). (I) comprising (III) and/or (III) is useful for stimulating and/or expanding Teells specific for an ovarian tumour protein comprising contacting cells with (III) or (III) (III) is useful in design and preparation of the tumour polypeptides and proteins in tumour cells) and for tollate a full languit general polypeptides and proteins in tumour cells, and to isolate a full languit general comparison.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    population of

The present invention describes a composition (1) comprising carriers and immunostimulants; and a polyprotected (III) having a cDN sequence (28) from the 10912 incleotide sequences a given in ALP7023 to (28) from the 10912 incleotide sequence as given in ALP7023 to (28) from the 10912 incleotide sequence (28), a T cell; (27) for continuous control of (II) or antique presenting cells that express (II). (28) can be used for detecting overlan cancer in a patient's biological sample preferably serum or ovariant tissue. The method comprises (28) can be used for detecting overlan cancer in a patient's biological sample preferably serum or ovariant tissue. The method comprises (28) can be a biological asmple from a patient with (IV), detecting the camount of polymucleotide hybridising to (IV) and comprising the predetermined cutoff value and thereby describing to (IV) is captility of the comprising context of the comprisi

Sequence 449 BP; 93 A, 160 C; 90 G; 106 T; 0 other;

The method comprises amount of polynucleotide hybridising to (IV) and comparing the amount of polynucleotide hybridising to (IV) and comparing the amount of polynucleotide hybridising to (IV) are predetermined cutoff value and thereby detecting ovarian cancer in the patient, where the amount of polynucleotide hybridising to (IV) is detected preferably by polynmerase chain reaction (FCN). (I) comprising (III) and/or (III) is useful for stimulating and/or expanding Teells specific for an ovarian tumour proctin comprising contacting Teells with (III) or (III). (III) is useful in design and preparation of the timour polypeptides and processing in tumour cells, and for isolate a full laught same from a subtable abstray eg., a tumour coult, altowin library using well known subtable abstray eg., as tumour can library using well known
